From the collection of:

Mike Jackson, FAIA

TWO hundred years ago men possessed few things. Life was a wrestle with the forest and the rocky soil: a hard life, but one which had many fine features. People were close to realities, and they were skilled in shaping materials to their purpose. The axe and plough were laid aside in the stormy days and long evenings of winter, and the forge, the hammer, and the gouge were used to create things of beauty and individuality.

These historic treasures form today an heritage of beautiful furniture, enriched by association with seven generations of our ancestors.

In perfect accord with the design and workmanship of these early times were the fittings of brass and iron which completed and perfected their form and usefulness. We have faithfully reproduced many of the most characteristic and distinguished of these old brass and iron pieces. Their shape and design, with all their irregularities, have been followed with care. Even the charm of age has been given to the objects.

It is in the belief that many Americans of our day are searching for just such reproductions that we have prepared this book, and we welcome any inquiries concerning them.
